

alert-primary	<div> <div> <div>&lt;div class="alert ale</div> <div>Text message to be di</div> <div>&lt;/div&gt;</div> <div> <div>&lt;</div> <div></div> <div>&gt;</div> </div> </div> </div>	Text message to be displayed.
alert-secondary	<div> <div> <div>&lt;div class="alert ale</div> <div>Text message to be di</div> <div>&lt;/div&gt;</div> <div> <div>&lt;</div> <div></div> <div>&gt;</div> </div> </div> </div>	Text message to be displayed.
alert-success	<div> <div> <div>&lt;div class="alert ale</div> <div>Success text to be di</div> <div>&lt;/div&gt;</div> <div> <div>&lt;</div> <div></div> <div>&gt;</div> </div> </div> </div>	Success message to be displayed.
alert-info	<div> <div> <div>&lt;div class="alert ale</div> <div>Info message to be di</div> <div>&lt;/div&gt;</div> <div> <div>&lt;</div> <div></div> <div>&gt;</div> </div> </div> </div>	Info message to be displayed
alert-warning	<div> <div> <div>&lt;div class="alert ale</div> <div>Warning message to be</div> <div>&lt;/div&gt;</div> <div> <div>&lt;</div> <div></div> <div>&gt;</div> </div> </div> </div>	Warning message to be displayed
alert-danger	<div> <div> <div>&lt;div class="alert ale</div> <div>Error message to be</div> <div>&lt;/div&gt;</div> <div> <div>&lt;</div> <div></div> <div>&gt;</div> </div> </div> </div>	Error message to be displayed

alert-heading	<pre>&lt;h4 class="alert-head</pre>  <p>can be used with any other alert class like info, success, danger etc for styling</p>	Alert success with heading
---------------	---	----------------------------

## Badges

badge	<p>Add badge, the same size of the previous (immediate) parent element by using em units and similar font size</p>	<pre>&lt;h1&gt;Heading text &lt;spa</pre> 
badge-pill	<p>used to make badges more rounded</p>	<pre>&lt;span class="badge ba</pre> 
badge-primary	<p>apply css styling corresponding to the primary badge</p> <pre>&lt;span class="badge ba</pre> 	Primary badge text variation
badge-secondary	<p>apply css styling corresponding to the secondary badge</p>	Secondary badge text variation

badge-success	styling to display badge indicating success	Success badge
badge-info	styling to display badge indicating info	Info badge
badge-warning	styling to display badge indicating warning	Warning badge
badge-danger	styling to display badge indicating danger	Danger badge
badge-light	styling to display badge indicating light background	Light badge
badge-dark	styling to display badge indicating dark background	Dark badge

## Breadcrumbs

breadcrumb	<p>indicate location of current page along with its navigation hierarchy separated through CSS separators using ::before and content</p> <pre>&lt;nav aria-label="bread   &lt;ol class="breadcru     &lt;li class="breadc     &lt;li class="breadc   &lt;/ol&gt;</pre>	Root / packages
------------	--	-----------------

# Buttons

btn	basic button feature	<div>&lt;button type="button"</div> <div><div></div></div>
btn-primary	display buttons with particular style for each class, for example, primary displays button with blue background	<div>&lt;button type="button"</div> <div><div></div></div>
btn-secondary	displays button with grey background	<div>&lt;button type="button"</div> <div><div></div></div>
btn-success	displays button with green background	<div>&lt;button type="button"</div> <div><div></div></div>

btn-info	button with background for info – light blue	<pre>&lt;button type="button"</pre> 
btn-warning	yellow background for warning button	<pre>&lt;button type="button"</pre> 
btn-danger	red background for danger button	<pre>&lt;button type="button"</pre> 
btn-light	light colored button	<pre>&lt;button type="button"</pre> 
btn-dark	dark colored button (black)	<pre>&lt;button type="button"</pre> 
btn-link	button with link	<pre>&lt;button type="button"</pre> 
btn-outline-primary	Button with outline and text color same as the primary (blue)	<pre>&lt;button type="button"</pre> 

btn-outline-success	Button with outline and text color same as the success (green)	<pre>&lt;button type="button"</pre> 
btn-outline-info	Button with outline and text color same as the info (light blue)	<pre>&lt;button type="button"</pre> 
btn-outline-warning	Button with outline and text color same as the warning (yellow)	<pre>&lt;button type="button"</pre> 
btn-outline-danger	Button with outline and text color same as the danger (red)	<pre>&lt;button type="button"</pre> 
btn-outline-light	Button with outline and text color same as the light (white)	<pre>&lt;button type="button"</pre> 
btn-outline-dark	Button with outline and text color same as the secondary (black)	<pre>&lt;button type="button"</pre> 

## Button Groups

		<pre>&lt;/div&gt; &lt;/div&gt;</pre>
--	--	--------------------------------------

## Button Modifiers

btn-lg	to create button of larger size than the default size	<pre>&lt;button type="button"</pre> 
btn-sm	to create button of size smaller than the default size	<pre>&lt;button type="button"</pre> 
btn-block	To create full width buttons that occupy the entire horizontal row	<pre>&lt;button type="button"</pre> 
active button	makes a button look like it is pressed	<pre>&lt;button type="button"</pre> 
disabled button	button that cannot be clicked (is disabled)	<pre>&lt;button type="button"</pre>  <p>for a link (&lt;a&gt;), disabled has to be used in the class - class="btn btn-warning"</p>

checkbox as button	display checkboxes as buttons, same can be done with radio using the input type as radio.	<pre>&lt;div class="btn-group"   &lt;label class="btn b     &lt;input type="chec   &lt;/label&gt;   &lt;label class="btn b     &lt;input type="chec   &lt;/label&gt; &lt;/div&gt;</pre> 
spinner buttons	add spinner (the loading circle component) to a button	<pre>&lt;button class="btn bt   &lt;span class="spinne     Loading..   &lt;/button&gt;</pre> 

## Cards

card	card is like a business card having padding around the content. There are options for header, content, footer etc..	<pre>&lt;div class="card"&gt;</pre> 
card-body	holds the content of the card	<pre>&lt;div class="card-bc</pre> 
card-title	The title of card that is displayed on top	<pre>&lt;h2 class="card-title</pre>

card-subtitle	Adds subtitle or quick small text	<pre>&lt;h6 class="card-subti</pre> 
card-text	Add lot of text and paragraphs to the card	<pre>&lt;p class="card-text"&gt;</pre> 
card-link	To add a link to a card; multiple links can be added	<pre>&lt;a href="#" class="c</pre> 
card-img-top	the main card image shown on the top	<pre>&lt;img class="card-img-</pre> 
middle image	To display an image in the middle, no need to specify card image class as top or bottom, just add the image tag.	<pre>&lt;img src="myimpimage.</pre> 
card-img-bottom	display image after the card content	<pre>&lt;img class="card-img-</pre> 
card-img-overlay	To display image in the background. Can contain text over it.	<pre>&lt;div class="card-img-   &lt;p class="card-te &lt;/div&gt;</pre> 

list-group	list of items in a card	<pre>&lt;ul class="list-group"&gt;   &lt;li class="list-group-item"&gt;     ...   &lt;li class="list-group-item"&gt;     ... &lt;/ul&gt;</pre> 
card-header	add header for a card	<pre>&lt;div class="card-header"&gt;   This is text for the header &lt;/div&gt;</pre> 
h*.card-header	card header with particular heading size, h1-h6	<pre>&lt;h3 class="card-header"&gt;   ... &lt;/h3&gt;</pre> 
card-footer	footer for the card	<pre>&lt;div class="card-footer"&gt;   footer content &lt;/div&gt;</pre> 
card-group	contains multiple cards side by side without any margins	<pre>&lt;div class="card-group"&gt;   ...card 1 div tags   ...card 2 div tags &lt;/div&gt;</pre> 
card-deck	creates cards side by side with margins. All cards are of equal size / height and width	<pre>&lt;div class="card-deck"&gt;   ...card 1 div tags   ...card 2 div tags &lt;/div&gt;</pre>

card-columns	cards are displayed as a grid with rows and columns that adjust automatically as cards are added or removed	<pre>&lt;div class="card-column"&gt; ...card 2 div tags &lt;/div&gt;</pre> 
card bg-... text-...	used to style the cards by formatting with different colors for text and background	<pre>&lt;div class = "card text"&gt; &lt;/div&gt;</pre> 

## Carousel

Adds slide show for going through elements in a cyclic fashion

carousel slide	adds animation and CSS transition effect while moving from one slide to next.	<pre>&lt;div class="carousel"&gt;</pre> 
carousel-fade	adds a fading effect when slide changes from one to next	<pre>&lt;div class="carousel"&gt;</pre> 
carousel-inner	contains individual slides to the carousel	<pre>&lt;div class="carousel-inner"&gt;</pre> 
carousel-item	Add an individual item (slide) to the carousel. The	<pre>&lt;div class="carousel-item"&gt;</pre>

		<code>&lt;div class="carousel-</code>
carousel-indicators	indicates the number of slides, current slide being shown as dots/bars at the bottom of the carousel	<pre> &lt;ul class="carousel-i   &lt;li data-target="   &lt;li data-target=" &lt;/ul&gt; </pre> 
carousel-caption	Adds caption for individual slides (carousel-item)	<pre> &lt;div class="carousel- </pre> 
carousel-control-prev	left control	<pre> &lt;a class="carousel- </pre> 
carousel-control-next	right control	<pre> &lt;a class="carousel- </pre> 

## Collapse

collapse	provides basic expand/collapse functionality	<pre> &lt;p&gt;   &lt;a class="btn btn-p     Click to expand/c   &lt;/a&gt; &lt;/p&gt; </pre>
----------	--	---

		<div> <div> </div> </div>
accordion	<p>accordion collapsible format using the card component</p>	<div> <div id="accordion"> <div class="card"> <div #1="" <="" a="" card-="" class="card- &lt;a class=" item=""> </div> <div <div="" c="" card"="" class="car text for expa &lt;/div&gt; &lt;/div&gt; &lt;div class=" id="item1"> <div #2="" <="" a="" class="card- &lt;a class=" colla="" item=""> </div> <div 848="" 875="" 922"="" 924="" <div="" c="" class="car text for expa &lt;/div&gt; &lt;/div&gt; &lt;/div&gt; &lt;/div&gt; &lt;/td&gt;&lt;/tr&gt; &lt;/table&gt; &lt;/div&gt; &lt;div data-bbox=" data-label="Image" id="item2"> </div></div></div></div></div>

## Dropdowns

dropdown	<p>Allows users to choose one value out of the many options. Dropdown can be a button or link. To add a down-arrow, use the caret class –</p> <pre>&lt;span class="caret"&gt;</pre> 	<pre>&lt;div class="dropdown"</pre>  <p>and then in the button or link definition, add</p> <pre>data-toggle="dropdown"</pre> <p>attribute</p>
dropdown (split)	<p>To show the dropdown menu with proper spacing around the caret. The caret is centred between the button (or link) and the dropdown menu when expanded.</p> <p>Use “dropdown-toggle dropdown-toggle-split” along with the button or link class.</p>	
dropup	<p>Same functionality as dropdown except the caret is pointed up and menu is shown above the button or link.</p>	<p>Use the div class as ‘dropup’ and data-toggle = “dropdown”</p>
dropup (split)	<p>Same as dropdown (split) but with menus shown above. The caret is</p>	

	<p>the class wherever the divider is required on the list.</p> <pre>&lt;div class="dropdown-</pre> 	
dropdown-item disabled	<p>To disable any action on a particular dropdown item; use the class “dropdown-item disabled” on the particular item</p>	
dropdown-item-active	<p>To make the particular dropdown item active by making the background blue. Add the class “dropdown-item active” to the particular item</p>	
dropdown-menu-right	<p>right align the drop-down menu</p>	<pre>&lt;div class="dropdown-</pre> 

## Forms

form-group	<p>creates a stacked form with proper margins when added as a wrapper around each input type or form control</p>	<pre>&lt;div class="form-gr</pre> 
form-inline	<p>all elements are inline and</p>	

form using the grid	use rows and columns inside form	<pre> &lt;form&gt;   &lt;div class="row"&gt;     &lt;div class="col"&gt;       &lt;input type="te     &lt;/div&gt;     &lt;div class="col"&gt;       &lt;input type="pa     &lt;/div&gt;   &lt;/div&gt; &lt;/form&gt; </pre> 
form-control	default class for styling <input>, <select> and <textarea> elements	<pre> &lt;input type="password </pre> 
form-control-lg	large size form area	<pre> &lt;input type="password </pre> 
form-control-sm	small size form area	<pre> &lt;input type="password </pre> 
form-control-file	form control to upload file	<pre> &lt;input type="file" cl </pre> 
	to have read only contents	<pre> &lt;input type="text" re </pre>

form-control-range	to include range element	<pre>&lt;input type="range" c</pre> 
form-check	to create a checkbox input	<pre>&lt;div class="form-grou &lt;input class="form-ch</pre> 
form-check-inline	to create checkboxes side by side <pre>&lt;div class="form-check form-check-inline"&gt;</pre>	
disabled items	Add items that cannot be clicked; are disabled (greyed out)	<pre>&lt;fieldset disabled&gt;   &lt;div class="form-gr     &lt;label for="di     &lt;input type="t   &lt;/div&gt; &lt;/fieldset&gt;</pre> 
readonly	adds read only text	<pre>&lt;input class="form-cc</pre> 

## Form input groups

input-group	container that enhances	
-------------	-------------------------	--

input-group-prepend	add a help text before the input field	<pre>&lt;div class="input-   &lt;span class="in &lt;/div&gt;</pre> 
input-group-append	add a help text after the input field	<pre>&lt;div class="input-   &lt;span class="in &lt;/div&gt;</pre> 
input-group-sm	for small input groups	<pre>&lt;div class="input-grc</pre> 
input-group-lg	for large input groups	<pre>&lt;div class="input-grc</pre> 
checkbox	add check box before or after input field	<pre>&lt;div class="input-grc   &lt;div class="input-g     &lt;div class="input       &lt;input type="ch     &lt;/div&gt;   &lt;/div&gt;   &lt;input type="text" &lt;/div&gt;</pre> 

		<pre>         &lt;div class="input           &lt;input type="ra         &lt;/div&gt;       &lt;/div&gt;       &lt;input type="text"     &lt;/div&gt; </pre>
dropdown	add dropdown before or after input field	<pre> &lt;div class="input-grc   &lt;div class="input-g     ...code to add dr   &lt;/div&gt;   &lt;input type="text" &lt;/div&gt; </pre>

## Custom Forms

custom-checkbox	create custom checkboxes	<pre> &lt;form&gt;   &lt;div class="custom-     &lt;input type="chec     &lt;label class="cus   &lt;/div&gt; &lt;/form&gt; </pre>
custom-radio	create custom radio buttons	<pre> &lt;form&gt;   &lt;div class="custom-     &lt;input type="radi     &lt;label class="cus </pre>

custom-switch	create custom toggle switch	<pre>&lt;div class="custom-cc   &lt;input type="checkk   &lt;label class="custc &lt;/div&gt;</pre> 
custom-select	create custom select options	<pre>&lt;select class="custom   &lt;option selected&gt;Cu   &lt;option value="1"&gt;\   &lt;option value="2"&gt;\   &lt;option value="3"&gt;\ &lt;/select&gt;</pre> 
custom-file	display custom file upload option	<pre>&lt;div class="custom-fi   &lt;input type="file"   &lt;label class="custc &lt;/div&gt;</pre> 
custom-range	create a custom range menu with rectangle pointer and bar	<pre>&lt;form&gt;   &lt;label for="customR   &lt;input type="range" &lt;/form&gt;</pre> 

col-lg-# ( ≥992px)	large column	<pre>&lt;div class="col-lg-#"&gt;   &lt;div class="col-lg-#"&gt;     &lt;div class="col-lg-#"&gt;</pre> 
col-xl-# ( ≥1200px)	extra large column	<pre>&lt;div class="col-xl-#"&gt;   &lt;div class="col-xl-#"&gt;     &lt;div class="col-xl-#"&gt;</pre> 
col	equal size column	<pre>&lt;div class="col"&gt;</pre>
col-*	equal width columns – col-sm, col-md, col-lg, col-xl	<pre>&lt;div class="col-#"&gt;</pre> 
no-gutters	remove horizontal padding between columns and margins between rows	<pre>&lt;div class="row no-gutter"&gt;   &lt;div class="col"&gt;</pre> 
offset-*-#	small, medium, large or extra large offsets with size	<pre>&lt;div class="col-# offset-#"&gt;   &lt;div class="col-# offset-#"&gt;</pre> 
order-#	order in which the column should appear	<pre>&lt;div class="col order-#"&gt;</pre>

nested columns	columns inside column	<pre> &lt;div class="row"&gt;   &lt;div class="col-sm-6"&gt;     Level 1: small column     &lt;div class="row"&gt;       &lt;div class="col-sm-6"&gt;         Nested column 1       &lt;/div&gt;       &lt;div class="col-sm-6"&gt;         Nested column 2       &lt;/div&gt;     &lt;/div&gt;   &lt;/div&gt; &lt;/div&gt; </pre> 
----------------	-----------------------	--

## Images

img-fluid	display image and adjust size automatically	<pre>&lt;img src="/images/dragon.jpg" class="img-fluid" /&gt;</pre> 
img-thumbnail	represents thumbnail image	<pre>&lt;img class="img-thumbnail" src="/images/dragon.jpg" /&gt;</pre> 

## Jumbotron

jumbotron	big box created to give extra focus on some special information or text. you can put any valid HTML elements inside jumbotron	<pre>&lt;div class="jumbotron"&gt;   &lt;h1&gt;heading&lt;/h1&gt;   &lt;p&gt;Everything will &lt;/div&gt;</pre> 
jumbotron-fluid	full-width jumbotron occupying the whole horizontal space without displaying the rounded borders	<pre>&lt;div class="jumbotron"&gt;   &lt;div class="container"&gt;     &lt;h1&gt;I am fluid ju     &lt;p&gt;I occupy the w   &lt;/div&gt; &lt;/div&gt;</pre> 

## List Group

list-group	display an unordered list with items	<pre>&lt;ul class="list-group"&gt;   &lt;li class="list-grc"&gt;   &lt;li class="list-grc"&gt;   &lt;li class="list-grc"&gt; &lt;/ul&gt;</pre> 
list-group-item active	highlight the active item	<pre>&lt;li class="list-grc"&gt;</pre>

list-group-item disabled	highlight the disabled item	<pre>&lt;li class="list-grc</pre> 
list-group-item-action	create list of linked items using the <div> class and <a> in place of <ul> and <li>	<pre>&lt;div class="list-grou   &lt;a href="#" class="   &lt;a href="#" class=" &lt;/div&gt;</pre> 
list-group-item-primary	color list items using the color code of the contextual class primary	<pre>&lt;li class="list-group</pre> 
list-group-item-secondary	color list items using the color code of the contextual class secondary	<pre>&lt;li class="list-group</pre> 
list-group-item-success	color list items using the color code of the contextual class success	<pre>&lt;li class="list-group</pre> 
list-group-item-info	color list items using the color code of the contextual class info	<pre>&lt;li class="list-group</pre> 
list-group-item-warning	color list items using the color code of the	<pre>&lt;li class="list-group</pre>

list-group-item-danger	color list items using the color code of the contextual class danger	<pre>&lt;li class="list-group</pre> 
list-group-item-light	colour list items using the color code of the contextual class light	<pre>&lt;li class="list-group</pre> 
list-group-item-dark	colour list items using the color code of the contextual class dark	<pre>&lt;li class="list-group</pre> 
list-group with badges	Add badge to list item	<pre>&lt;li class="list-group   Starred &lt;span class="badge ba</pre> 
list-group with d-flex	full-width box for list items	<pre>&lt;li class="list-group</pre> 
list-group-horizontal	create horizontal list items	<pre>&lt;ul class="list-group</pre> 
list-group-flush	remove borders and rounded corners	<pre>&lt;ul class="list-group</pre> 

# Media objects

media	provides easy way to align media objects along with content. Used for social media objects like tweets, blog post comments etc...	<pre>&lt;div class="media"&gt;   &lt;img src="img_1.png"   &lt;div class="media-body"&gt;     -- some content here   &lt;/div&gt; &lt;/div&gt;</pre> 
nested media	achieved by placing a new media container inside the .media-body container	<pre>&lt;div class="media"&gt;   &lt;img src="img_1.png"   &lt;div class="media-body"&gt;     -- some content here     &lt;div class="media"&gt;       &lt;img src="img_2.png"       &lt;div class="media-body"&gt;         -- some content here       &lt;/div&gt;     &lt;/div&gt;   &lt;/div&gt; &lt;/div&gt;</pre> 
d-flex align-self-start	top alignment	<pre>&lt;img src="img_1.png" /&gt;</pre> 
d-flex align-self-center	middle alignment	<pre>&lt;img src="img_1.png" /&gt;</pre> 

d-flex align-self-end	bottom alignment	<pre>&lt;img src="img_1.png"</pre> 
right aligned media	right alignment of media object i.e. text on left and image on right side – just move the img tag after the div tag	<pre>&lt;div class="media"&gt;   &lt;img src="img_1.png"   &lt;div class="media-t     -- some content a   &lt;/div&gt; &lt;img src="img_1.png" &lt;/div&gt;</pre> 

## Modal

modal	to open a modal dialog window on the current page based on user event	<pre>-- open the modal dia &lt;button type="button"   Open modal dialog &lt; -- modal creation &lt;div class="modal" ic -- inside content &lt;/div&gt;</pre> 
modal-dialog-centered	open modal dialog in the center of page	<pre>&lt;div class="modal-dia</pre> 
modal-dialog-scrollable	to add a scroll bar to the	

modal fade	add fading effect while opening or closing the modal box	<pre>&lt;div class="modal fade"&gt;</pre> 
modal-lg	large size modal	<pre>&lt;div class="modal-dialog"&gt;</pre> 
modal-sm	small sized modal	<pre>&lt;div class="modal-dialog"&gt;</pre> 
modal-xl	extra-large size modal box	<pre>&lt;div class="modal-dialog"&gt;</pre> 

## Navs

ul.nav	create horizontal menus by adding .nav class to the ul element and then add .nav-item for individual li items. Add links using .nav-link	<pre>&lt;ul class="nav"&gt;   &lt;li class="nav-item"&gt;     &lt;a class="nav-link"&gt;</pre>  <p>... other nav links</p>
nav.nav	create horizontal menus in the nav element itself	<pre>&lt;nav class="nav"&gt;   &lt;a class="nav-link"&gt;</pre>

nav justify-content-*	justify navigation content to the end (right) or center	<pre>&lt;ul class="nav justify-content-end"&gt;</pre> <pre>&lt;ul class="nav justify-content-center"&gt;</pre> 
nav flex-column	create vertical navigation	<pre>&lt;ul class="nav flex-column"&gt;</pre> 
nav-tabs	make the active nav as a tab	<pre>&lt;ul class="nav nav-tabs"&gt;</pre> <pre>&lt;li class="nav-item"&gt;</pre> <pre>&lt;a class="nav-link" href="#"&gt;</pre> <pre>&lt;/li&gt;</pre> 
nav-pills	shows the navigation menu as navigation pills. You can toggle the pills using data-toggle = "pills" option	<pre>&lt;ul class="nav nav-pills"&gt;</pre> 
nav-fill	use .nav-fill to fill the available space proportionately. Can be used on pills or tabs	<pre>&lt;ul class="nav nav-pills nav-fill"&gt;</pre> 
nav-justified	justify the pills or tabs using this option (all equal width tabs or pills)	<pre>&lt;ul class="nav nav-pills nav-justified"&gt;</pre> <pre>&lt;ul class="nav nav-tabs nav-justified"&gt;</pre> 

		<pre>         &lt;a class="nav-link"       &lt;/li&gt;        &lt;li class="nav-item"        ... code for dropdown </pre>
nav-pills with dropdown	Creates pills with dropdown menu alongside other navigation items	<div>◀  ▶</div> <pre> &lt;ul class="nav nav-pills"   &lt;li class="nav-item"     &lt;a class="nav-link"   &lt;/li&gt;    &lt;li class="nav-item"    ... code for dropdown </pre> <div>◀  ▶</div>

## Navbar

navbar	navigation header placed at the top of a webpage	<pre> &lt;ul class="navbar-nav" </pre> <div>◀  ▶</div>
navbar-brand	used to highlight a brand, main project or logo of the page	<pre> &lt;a class="navbar-brand" </pre> <div>◀  ▶</div>
navbar with form	add form controls in a	<pre> &lt;nav class="navbar navbar-expand"   &lt;form class="form-inline" </pre>

navbar-text	to add navbar text	<pre>&lt;span class="navbar-text"&gt;</pre> 
navbar-dark bg-dark	add navigation bar with dark background; other possibilities are primary, secondary, success, light, warning, danger, info	<pre>&lt;nav class="navbar navbar-dark bg-dark"&gt;</pre> 
navbar-light	navigation bar with light background	<pre>&lt;nav class="navbar navbar-light"&gt;</pre> 
navbar fixed-top	nav bar that is fixed on top of the page	<pre>&lt;nav class="navbar fixed-top"&gt;</pre> 
navbar fixed-bottom	nav bar that is fixed on bottom of the page	<pre>&lt;nav class="navbar fixed-bottom"&gt;</pre> 
navbar sticky-top	sticks to the top of the page when scrolled over	<pre>&lt;nav class="navbar sticky-top"&gt;</pre> 
collapse navbar-collapse	collapse navigation bars and display only when clicked. Useful for small screens like mobile devices	<pre>&lt;button class="navbar-toggler"&gt;   &lt;div class="collapse"&gt;</pre> 

navbar-toggler	used to add expand/collapse functionality to navbar	<pre>&lt;button class="navbar</pre> 
navbar-expand-*	responsive collapsing class – to stack the navbar vertically as per size (* - sm, md, lg, xl)	<pre>&lt;nav class="navbar na</pre> 

## Pagination

pagination	add basic pagination to display only certain records on one page	<pre>&lt;ul class="pagination   &lt;li class="page-ite   &lt;li class="page-ite   &lt;li class="page-ite &lt;/ul&gt;</pre> 
page-item disabled	to disable a particular page number or item from being clicked	<pre>&lt;li class="page-item   &lt;a class="page-</pre> 
page-item active	to indicate the currently active page item	<pre>&lt;li class="page-item</pre> 
pagination-lg	display larger size pagination blocks	<pre>&lt;ul class="pagination</pre>

pagination-sm	display smaller size pagination blocks	<pre>&lt;ul class="pagination</pre> 
---------------	--	---

## Popover

popovers	<p>display popover text on click (similar to tooltip). Popover position can be set using the data-placement attribute,</p> <p>data-placement = top/bottom/left/right</p> <p>Text is closed when the box is clicked again</p>	<pre>&lt;a href="#" title="my</pre> 
dismissible popover	<p>to close the popover text when user clicks outside the element anywhere in the document</p>	<pre>&lt;a href="#" title="Di</pre> 
hover popover	<p>display popover when user moves the mouse pointer over the element</p>	<pre>&lt;a href="#" title="He</pre> 

# Progress

progress	class to add a progress element to the container	<pre>&lt;div class="progress"&gt;</pre> 
progress-bar	the main element for progress bar	<pre>&lt;div class="progress-&gt;</pre> 
progress-bar with label	to show a visible percentage (or some text) in the progress bar	<pre>&lt;div class="progress-&gt;</pre> 
progress-bar with height	to change the default value, add the css property height. Default value is 16px	<pre>&lt;div class="progress-&gt;</pre> 
progress-bar bg-*	color for the progress bar. Can be primary, secondary, dark, light, info, success, warning, danger	<pre>&lt;div class="progress"&gt;</pre> 
multiple progress-bar	progress bars can be stacked one after other horizontally inside the same "progress" class.	<pre>&lt;div class="progress"&gt;   &lt;div class="progres   &lt;div class="progres   &lt;div class="progres &lt;/div&gt;</pre> 

progress-bar-striped	add a striped progress bar	<pre>&lt;div class="progress-</pre> 
progress-bar-striped bg-*	striped progress bar with background color	<pre>&lt;div class="progress-</pre> 
progress-bar-animated	animated progress bar	<pre>&lt;div class="progress-</pre> 

## Scrollspy

data-spy	Used to automatically update the links of a navigation list depending on the scroll position	data-spy="scroll" should be added to the element, usually <body> that needs to be used as a scrollable area.
----------	--	--

## Spinner

spinner-border	create a spinner (loader)	<pre>&lt;div class="spinner-t</pre> 
spinner-border text-*	spinner with specific styling. * can be primary, secondary, info, success,	<pre>&lt;div class="spinner-t   &lt;span class="sr-onl</pre>

		</div>
spinner-border-sm	small size spinner	<div class="spinner-border" style="width: 100px; height: 10px; background-color: #6c757d; border: 2px solid #6c757d; border-radius: 5px; position: relative;"><div style="position: absolute; left: -5px; top: -5px;">◀</div><div style="position: absolute; right: -5px; top: -5px;">▶</div></div>
spinner-grow	spinner that grows and shrinks alternately	<div class="spinner-grow" style="width: 100px; height: 10px; background-color: #6c757d; border-radius: 5px; position: relative;"><div style="position: absolute; left: -5px; top: -5px;">◀</div><div style="position: absolute; right: -5px; top: -5px;">▶</div></div>
spinner-grow text-*	growing spinners in different colors – primary, secondary etc...	<div class="spinner-grow" style="width: 100px; height: 10px; background-color: #6c757d; border-radius: 5px; position: relative;"><div style="position: absolute; left: -5px; top: -5px;">◀</div><div style="position: absolute; right: -5px; top: -5px;">▶</div></div>
spinner-grow-sm	small sized growing spinners	<div class="spinner-grow" style="width: 100px; height: 10px; background-color: #6c757d; border-radius: 5px; position: relative;"><div style="position: absolute; left: -5px; top: -5px;">◀</div><div style="position: absolute; right: -5px; top: -5px;">▶</div></div>

## Tables

table	to add basic table	<pre>&lt;table class="table"&gt;</pre> 
thead-light	light header background for the table header (<th>)	<pre>&lt;thead class="thead-l</pre> 

thead-dark	dark header background for the table header (<th>)	<pre>&lt;thead class="thead-dark"&gt;</pre> 
table-striped	striped table background with alternate dark and light (zebra)	<pre>&lt;table class="table-striped"&gt;</pre> 
table-bordered	bordered (ruled) table	<pre>&lt;table class="table-bordered"&gt;</pre> 
table-borderless	table without any borders	<pre>&lt;table class="table-borderless"&gt;</pre> 
table-hover	adds hover effect (dark background on mouse hover)	<pre>&lt;table class="table-hover"&gt;</pre> 
table-sm	small size table	<pre>&lt;table class="table-sm"&gt;</pre> 
table-*-responsive	responsive tables; a horizontal scrollbar is added for small screens (<992px) if required  can be sm,md,lg or xl	<pre>&lt;table class="table-responsive"&gt;</pre> 

table-active	contextual class active indicates active row in grey	<pre>&lt;tr class="table-acti</pre> 
table-primary	contextual class primary adds blue background to table	<pre>&lt;tr class="table-prir</pre> 
table-secondary	contextual class secondary adds specific color background to table	<pre>&lt;tr class="table-secc</pre> 
table-success	contextual class success adds green color background to table	<pre>&lt;tr class="table-succ</pre> 
table-info	contextual class info adds specific blue background to table	<pre>&lt;tr class="table-infc</pre> 
table-warning	contextual class warning adds yellow color background to table	<pre>&lt;tr class="table-warr</pre> 
table-danger	contextual class danger adds specific red/pink background to table	<pre>&lt;tr class="table-dang</pre> 

table-dark	contextual class secondary adds dark (grey/black) background to table	<pre>&lt;tr class="table-dark</pre> 

## Toasts

toast	a quick alert box that appears only for a few seconds when any user event happens (button click, form submit etc...). contains of two parts – header and body	<pre>&lt;div class="toast"&gt;   &lt;div class="toast-h     The Header   &lt;/div&gt;   &lt;div class="toast-b     The text for toas   &lt;/div&gt; &lt;/div&gt;</pre>  
-------	---	--

## Tooltips

tooltip	small popup box that appears when user hovers the mouse over an element (moves the mouse lightly without clicking)	<pre>&lt;a href="#" data-togg</pre> 
---------	--	---

## Typography

display-# (1-4)	display heading of different sizes from 1-4, with larger font size and crispier font weight than the normal headings	<pre>&lt;h1 class="display-1"&gt; &lt;h1 class="display-2"&gt; &lt;h1 class="display-3"&gt; &lt;h1 class="display-4"&gt;</pre> 
lead	make a paragraph to stand out from others	<pre>&lt;p class="lead"&gt;This</pre>  <p>Result -</p> <p>This paragraph stands out amongst others</p>
blockquote	used to quote blocks of text from a different source	<pre>&lt;blockquote class="bl"&gt;   &lt;p&gt;Lot of content&lt;/p&gt; &lt;/blockquote&gt;</pre> 
blockquote-footer	footer for the blockquote text	<pre>&lt;footer class="blockq"&gt;</pre> 
list-unstyled	removes default list style and the left margin from the immediate child list items	<pre>&lt;ul class="list-unsty"&gt;</pre> 
list-inline	place all the list items in a	<pre>&lt;ul class="list-inlin"&gt;</pre>

dl-horizontal	definition list. Contains <dt> and <dd> elements. dl-horizontal makes terms and descriptions stand side-by-side	<pre>&lt;dl class = "dl-horiz   &lt;dt&gt;Description&lt;/   &lt;dd&gt;Item&lt;/dd&gt; &lt;/dl&gt;</pre> 
mark	highlight a text with yellow background and some padding using mark element	<pre>&lt;mark&gt;highlight text&lt;</pre> 
abbr	style the element with dotted border bottom	<pre>&lt;abbr&gt;ABC&lt;/abbr&gt;</pre>
code	the code snippets are embedded in the code element.	<pre>&lt;code&gt;span&lt;/code&gt;</pre>
kbd	display keyboard inputs with black background (with specific styling)	<pre>&lt;kbd&gt;ctrl + c&lt;/kbd&gt;</pre> 

## Utility: Borders

border	to add border to a text	<pre>&lt;span class="border t</pre> 
border-*-0	border-0 represents no	

	way bottom, right and left are possible	<span class="p-1 bord
border-*	coloured border based on contextual classes. Possible values – primary, secondary, success, danger, warning, info, light, dark, white	<span class="border t <span class="border t 
rounded	refers to rounded image border	<img class="rounded" 
rounded-sm	small rounded edges	<img class="rounded-s 
rounded-lg	large rounded edges	<img class="rounded-l 
rounded-circle	rounded circular image	<img class="rounded-c 
rounded-0	no rounding (sharp edges)	<img class="rounded-0 

rounded-*	rounded from 2 sides on left, right, top or bottom	<pre>&lt;img class="rounded-t</pre> 
-----------	--	---

## Utility: Colors

bg-primary	use blue background	<pre>&lt;div class="bg-primar</pre> 
bg-secondary	use grey background	<pre>&lt;div class="bg-seconcd</pre> 
bg-success	use green background	<pre>&lt;div class="bg-succes</pre> 
bg-info	use light blue background	<pre>&lt;div class="bg-info"&gt;</pre> 
bg-warning	use yellow background	<pre>&lt;div class="bg-warnin</pre> 
bg-danger	use red background	<pre>&lt;div class="bg-danger</pre>

bg-light	use light (white or light grey) background	<pre>&lt;div class="bg-light"&gt;</pre> 
bg-dark	use black (dark) background	<pre>&lt;div class="bg-dark"&gt;</pre> 
bg-white	use white background	<pre>&lt;div class="bg-white"&gt;</pre> 
text-*	use specific colors for the text. Values can be primary, secondary, success, info, warning, danger, light, dark, white	<pre>&lt;p class="text-primary"&gt;</pre> <pre>&lt;p class="text-success"&gt;</pre> <p>...and so on</p> 

## Utility: Display

d-*-block	display block with specific styling	<pre>&lt;span class="d-block"&gt;</pre> <pre>&lt;span class="d-sm-block"&gt;</pre> 
d-*-flex	display flex items with specific styling	<pre>&lt;div class="d-flex"&gt;</pre>

		<code>&lt;span class="d-md-fle</code>
<code>d-*-inline</code>	inline display with specific styling	<code>&lt;div class="d-inline</code> <code>&lt;div class="d-md-inli</code> 
<code>d-*-inline-block</code>	display inline block	<code>&lt;div class="d-inline-</code> <code>&lt;div class="d-lg-inli</code> 
<code>d-*-inline-flex</code>	styling for inline flex	<code>&lt;div class="d-inline-</code> <code>&lt;div class="d-lg-inli</code> 
<code>d-*-none</code>	hide display for certain element (same as display: none)	<code>&lt;div class="d-none"&gt;.</code> <code>&lt;div class="d-lg-none</code> 
<code>d-*-table</code>	display styling for table	<code>&lt;div class="d-table"&gt;</code> <code>&lt;div class="d-lg-tabl</code>

d-*-table-cell	styling for table cell	<pre>&lt;div class="d-table-c</pre> <pre>&lt;div class="d-lg-tabl</pre> 
d-print-...	controls how elements have to be displayed while printing. Value can be none, block, inline, inline-block, table, table-row, table-cell, flex, inline-flex	<pre>&lt;div class="d-print-t</pre> 

## Utility: Flexbox

flex- *- column	flex column to display content vertically (top to bottom). Responsive	<pre>&lt;div class="d-flex flex-column"&gt; &lt;!--default size--&gt;</pre> <pre>&lt;div class="d-flex flex-sm-column"&gt;...&lt;/div&gt;</pre>
-----------------------	---	---

align-items-* stretch	stretch items to full width of flex container	<pre>&lt;div class="d-flex align-items-stretch"&gt;</pre> <pre>&lt;div class="d-flex align-items-sm-stretch"&gt;...&lt;/div&gt;</pre>
align-self-* start	self-align individual flex item to start (default)	<pre>&lt;div class="align-self-start"&gt;flex item align&lt;/div&gt;</pre> <pre>&lt;div class="align-self-md-start"&gt;...&lt;/div&gt;</pre>
align-self-* end	self-align individual flex item to end	<pre>&lt;div class="align-self-end"&gt;flex item align&lt;/div&gt;</pre> <pre>&lt;div class="align-self-md-end"&gt;...&lt;/div&gt;</pre>
align-self-* center	self-align individual flex item to center	<pre>&lt;div class="align-self-center"&gt;flex item align&lt;/div&gt;</pre> <pre>&lt;div class="align-self-md-center"&gt;...&lt;/div&gt;</pre>
align-self-* baseline	self-align individual flex item to baseline	<pre>&lt;div class="align-self-baseline"&gt;flex item align&lt;/div&gt;</pre> <pre>&lt;div class="align-self-md-baseline"&gt;...&lt;/div&gt;</pre> 
align-self-* stretch	stretch to full width	<pre>&lt;div class="align-self-stretch"&gt;flex item align&lt;/div&gt;</pre> <pre>&lt;div class="align-self-md-stretch"&gt;...&lt;/div&gt;</pre>

order-*-#	change the order of display of particular flex items from 0-12	<pre>&lt;div class="order-12"&gt;first item&lt;/div&gt; &lt;!--will be disp.</pre> <pre>&lt;div class="order-sm-3"&gt;ordered flex item&lt;/div&gt;</pre> 
-----------	--	--

## Utility: Misc

close	to display close option	<pre>&lt;button type="button"</pre> 
embed-responsive	embed a responsive media of particular size	<pre>&lt;div class="embed-res   &lt;iframe class="embe &lt;/div&gt;</pre> 
shadow-none	background without shadow and with specific css styling properties	<pre>&lt;div class="shadow-nc</pre> 
shadow-sm	small shadow	<pre>&lt;div class="shadow-sm</pre> 

shadow	regular shadow option	<pre>&lt;div class="shadow p-</pre> 
shadow-lg	large shadow	<pre>&lt;div class="shadow-lg</pre> 
invisible	to mark an element as invisible	<pre>&lt;div class="invisible</pre> 
visible	mark an element as visible	<pre>&lt;div class="visible"&gt;</pre> 
sr-only	show a particular element on screen readers only	<pre>&lt;span class="sr-only"</pre> 
stretched-link	make the containing block of a link clickable by using stretched-link. Can be used on card, media etc...	<pre>&lt;a href="#" class="st</pre> 

## Utility: Positioning

align-*	align at baseline, top, bottom, middle, text-top,	example -
---------	---	-----------

clearfix	used to clear floats left and right. Used when the screen is wide or small	<pre>&lt;div class="clearfix"   &lt;span class="float-     &lt;span class="float-   &lt;/div&gt;</pre> 
fixed-top	make any element stay on the top of the page independent of scrolling	<pre>&lt;nav class="fixed-top</pre> 
fixed-bottom	make any element stay on the bottom of the page independent of scrolling	<pre>&lt;nav class="fixed-bot</pre> 
sticky-top	can be anywhere on the page, but when scrolled past, stays at top of the page	<pre>&lt;div class="sticky-tc</pre> 
float-*-left	float left on the screen; * can be sm, md, lg, xl	<pre>&lt;div class="float-sm-   &lt;div class="float-lef</pre> 
float-*-right	float right on the screen; * can be sm, md, lg, xl	<pre>&lt;div class="float-md-   &lt;div class="float-rig</pre> 

float-*-none	no floating for the particular viewport	<div> <div>&lt;div class="float-lg-</div> <div>&lt;div class="float-nor</div> <div> <div>&lt;</div> <div></div> <div>&gt;</div> </div> </div>
--------------	---	---

## Utility: Sizing

w-*	specified width of a div tag; can be any percentage upto 100%	<div> <div>&lt;div class="w-25 p-3"</div> <div> <div>&lt;</div> <div></div> <div>&gt;</div> </div> </div>
h-*	customized height for div tag	<div> <div>&lt;div class="h-50 d-in</div> <div> <div>&lt;</div> <div></div> <div>&gt;</div> </div> </div>
mw-*	maximum width	<div> <div>&lt;div class="mw-100 bg</div> <div> <div>&lt;</div> <div></div> <div>&gt;</div> </div> </div>
mh-*	maximum height	<div> <div>&lt;div class="mw-75 bg-</div> <div> <div>&lt;</div> <div></div> <div>&gt;</div> </div> </div>

## Utility: Spacing

m-1 / m-* #	spaced div tags with margin on all sides; star	<div class="m-4 bg-su
-------------	--	-----------------------

mt-1 / mt-*-#	margin on top	<div>&lt;div class="mt-3 bg-w</div> 
mr-1 / mr-*-#	margin on right	<div>&lt;div class="mr-3 bg-w</div> 
mb-1 / mb-*-#	bottom margin	<div>&lt;div class="mb-3 bg-w</div> 
ml-1 / ml-*-#	left margin	<div>&lt;div class="ml-3 bg-w</div> 
mx-1 / mx-*-#	left and right (x-axis) margin	<div>&lt;div class="mx-3 bg-p</div> 
my-1 / my-*-#	top and bottom (y-axis) margin	<div>&lt;div class="my-3 bg-p</div> 
m-n1 / m-*-n#	negative spacing (change of direction) – can be any of the above – left, right, top, bottom, x, y	<div>&lt;div class="m-n5 bg-p</div> 

pt-1 / pt-*-#	padding on top	<div>&lt;div class="pt-3 bg-c</div> 
pr-1 / pr-*-#	padding on right	<div>&lt;div class="pr-3 bg-c</div> 
pb-1 / pb-*-#	padding on bottom	<div>&lt;div class="pb-3 bg-c</div> 
pl-1 / pl-*-#	padding on left	<div>&lt;div class="pl-3 bg-c</div> 
px-1 / px-*-#	padding on left and right (x-axis)	<div>&lt;div class="px-3 bg-c</div> 
py-1 / py-*-#	padding on top and bottom (y-axis)	<div>&lt;div class="py-3 bg-c</div> 

# Utility: Text

font-weight-bold	to write text in bold	<div>&lt;p class="font-weight</div> <div><div></div></div>
font-weight-bolder	bolder than bold	<div>&lt;p class="font-weight</div> <div><div></div></div>
font-weight-light	light text, lighter than the normal text weight	<div>&lt;p class="font-weight</div> <div><div></div></div>
font-weight-lighter	lighter than light text weight	<div>&lt;p class="font-weight</div> <div><div></div></div>
font-weight-normal	normal text	<div>&lt;p class="font-weight</div> <div><div></div></div>
text-decoration-none	no text decoration	<div>&lt;p class="text-decora</div> <div><div></div></div>

text-monospace	text in monospace	<pre>&lt;p class="text-monosp</pre> 
text-justify	justified text; justify can be left, right, center	<pre>&lt;p class="text-justif</pre> 
text-nowrap	text without word wrapping	<pre>&lt;p class="text-nowrap</pre> 
text-*-left	text-sm-left, text-md-left, text-lg-left, text-xl-left  where sm = small, md= medium, lg = large, xl = extra large	<pre>&lt;p class="text-sm-lef</pre> 
text-*-right	text-sm- right, text-md- right, text-lg- right, text-xl- right  where sm = small, md= medium, lg = large, xl = extra large	<pre>&lt;p class="text-md-rig</pre> 
text-*-center	text-sm- center, text-md- center, text-lg- center, text-xl- center  where sm = small, md= medium, lg = large, xl = extra large	<pre>&lt;p class="text-lg-cer</pre> 

text-lowercase	lowercase letters	<pre>&lt;p class="text-lowerc</pre> 
text-uppercase	uppercase letters	<pre>&lt;p class="text- upper</pre> 
text-capitalize	Capitalize Each Word in the comprising text	<pre>&lt;p class="text-capita</pre> 
text-truncate	truncate the comprising text with an ellipsis at block or inline level	<pre>&lt;p class="text-trunca</pre> 
text-body	display text in default settings	<pre>&lt;p class="text-body"&gt;</pre> 
text-black-50	lighter than normal text (50% opaque black).	<pre>&lt;p class="text-black-</pre> 
text-white-50	white text that is 50% opaque in appearance	<pre>&lt;p class="text-white-</pre>
